MODIFIKATION DES BATTERIEFACHS

FEHLERERSCHEINUNG:

In einigen Fällen kann es bei o.a. Handsendern bei rauhem "Handling" zu Aussetzern der Spannungsversorgung kommen, wodurch die Übertragung kurzzeitig abreißt. Ursache hierfür kann eine nicht ausreichende Batteriekontaktierung sein, da die mechanischen Abmessungen der 9V-Blockbatterien in Abhängigkeit des Herstellers variieren.

ABHILFE:

Zur verbesserten Fixierung der Batterie werden insgesamt 4 Schaumpolster in das Batteriefach eingeklebt. Für die exakte Montage und Positionierung der Polster ziehen Sie bitte umseitige schematische Darstellung heran.

INHALT:

- Schematische Darstellung des Batteriefachs aller betroffenen Handsender.
- Montageanleitung für die Schaumpolster.

ALLGEMEINES:

Heften Sie diese Service-Information zu den entsprechenden Service-Anleitungen.

MODIFICATION OF BATTERY COMPARTMENT

TROUBLE:

The supply voltage of some hand-held transmitters as listed above may be interrupted intermediately when the transmitters are handled roughly thus causing transmission drop-outs. The problem arising is insufficient battery-contacting due to not-standardized mechanical dimensions of the 9V-batteries depending on manufactures' specifications.

REMEDY:

4 adhesive foam pads are placed in the battery compartment for tighter fitting of the battery. Please refer to the schematic drawing next page for the exact mounting of those pads.

CONTENTS:

- Schematic drawing of battery compartment for all hand-held transmitters affected.
- Mounting instruction for foam pads.

GENERAL:

Please file this service information together with the respective service manuals.

3 ALLGEMEINES

3.1 INHALT DER SERVICE-ANLEITUNG

Eine Reparatur kann durch Baugruppentausch vorgenommen werden. Diese Form der Reparatur hat sich in der Praxis bewährt und begrenzt das notwendige Funktionsverständnis auf die Baugruppen.

Auf geeigneten Meßplätzen kann die Reparatur der Moduln bis auf Bauteilebene erfolgen. Detaillierte Reparaturanleitungen befinden sich in den Service-Hinweisen und der Prüf- und Abgleichanleitung.

Die Service-Anleitung vermittelt das entsprechende Wissen zur Fehlerlokalisierung und Reparatur des BF 1081-V.

3.2 SERVICE-KONZEPT

3.2.1 Leiterplatte

Die Leiterplatte des BF 1081-V ist als 2-seitig kupferkaschierte Platine aufgebaut und kann durch einen unsachgemäßen Reparaturversuch irreparabel beschädigt werden.

3.2.2 Service-Anleitung

Die Service-Anleitung soll dem Techniker die Möglichkeit bieten, die wichtigsten Reparatur- und Abgleicharbeiten ausführen zu können.

Die Service-Anleitung kann im Bedarfsfall auch dem Kunden ausgehändigt werden.

3.2.3 SMD (Surface Mounted Devices)

Die Leiterplatten des BF 1081-V sind weitgehend mit Chip-Elementen (SMD) bestückt. Sollte beim Hantieren mit den Baugruppen ein SMD mechanisch zerstört werden, ist es erforderlich, dieses Bauelement zu ersetzen.

SMD werden direkt auf die dafür vorgesehenen Lötflächen gelötet. Hierfür besitzen sie lötfähige Stirnkontaktierungen, die weitgehend hitzeunempfindlich sind.

Zum Auswechseln ist folgendes Werkzeug erforderlich: Neben einer Pinzette und einem normalen temperaturgeregelten LötKolben (z. B. Weller mit 0,8 mm Flachkopflötspitze PT-H 7 oder 0,8 mm Langkopflötspitze PT-K 7) sollten noch ein absolut rückschlagfreies Absauggerät und 1,2 mm Entlötlitze vorhanden sein. Sinnvoll ist eine Arbeitslupe.

Die Lötzeit ist so kurz wie möglich zu halten, damit die Leiterbahnen nicht beschädigt werden. Besonders beim Auslöten der Bauteile ist darauf zu achten, daß die Leiterbahnen nicht abgehoben werden. Danach ist die Auflagefläche der Bauteile von Lötresten zu säubern. Um mechanische Spannungen in den Bauteilen zu vermeiden, sollte man erst nach dem Erkalten der ersten Lötstelle die gegenüberliegende Seite anlöten.

Eine Wiederverwendung eines bereits ausgelöteten Chip-Bauelementes ist nicht zulässig. Dies gilt auch dann, wenn es offensichtlich fehlerfrei ist, da durch die mechanische Beanspruchung beim Ein- und Auslöten eine Beschädigung nicht ausgeschlossen werden kann.

Die SMD werden als Ersatzteile in Packeinheiten von je 50 Stück geliefert. Die Lagerbehälter müssen verwechslungssicher gekennzeichnet sein, da nur dadurch eine Unterscheidung der Bauteile möglich ist.

3 GENERAL

3.1 CONTENTS OF THIS SERVICE MANUAL

Practical experience gained from corrective maintenance shows that it is best to repair the unit by replacing defective modules. This type of repair has proven to be good in practical use as it spares the service engineer the effort to learn all details on the unit's complex circuit design.

Special tools and test equipment allow the modules to be easily repaired up to the lowest level, i.e. their individual components. Detailed instructions are given in the service hints as well as in the test and alignment instructions.

The present service manual shall provide the service engineer with important information required to find faults and to repair the BF 1081-V.

3.2 SERVICE CONCEPT

3.2.1 Printed circuit board

The PCB incorporated into the BF 1081-V is a double-sided printed circuit board which can be accidentally damaged through improper handling or repair.

3.2.2 Service manuals

The present document shall help the service engineer to accomplish the most important maintenance and repair work.

The service manual may be handed to customers, if need be.

3.2.3 SMD (Surface Mounted Devices)

The PCBs incorporated into the BF 1081-V chiefly include Surface Mounted Devices (SMD). Should one SMD be accidentally damaged, replace the defective component with a new one.

SMDs are to be soldered to the surface provided for this purpose. They feature solderable contacts which are relatively insensitive to heat.

Tools required to replace SMDs: tweezers, temperature-controlled soldering iron (e.g. Weller with 0.8 mm flat headed soldering tip PT-H 7 or 0.8 mm oblong soldering tip PT-K 7), blow-back proof unsoldering set, 1.2 mm unsoldering wire. It is recommendable to use magnifying glasses.

Minimize the soldering time in order not to damage the PCB. Be careful not to damage any tracks when unsoldering the components to be replaced. Clean the surface. Wait until the first soldered joint has cooled down before starting to solder the opposite side. This serves to avoid stress built-up in the components.

Do not reuse unsoldered components, even if they seem to be faultless. Mechanical damage, possibly caused by soldering or unsoldering some components, cannot be excluded.

SMDs are available as spare parts, 50 pcs. packaged in a poly bag. Containers or packages should be marked in order to make the components distinguishable from each other.
